TITLE : TERMINAL DEVICE FOR MOTOR

ABSTRACT : **PURPOSE:** To improve the treatment of end sections, by a method wherein a terminal assembly insulatively-fixing sheet conductive hardware group is fitted and connected to the spools provided with terminal pins.

CONSTITUTION: Terminal pins 3 are provided to be pressed in the spools 2 wound up with stator windings 1. And sheet conductive hardware 4 are vertically insulatively-fixed to the terminal pins 3 by resin mold 5 to be integrated together as terminal assembly 13. Then, a locking groove 10 to be fitted on a frame 9 providing spools 2 externally is provided for the resin mold 5. Feed wires 6 are soldered to the sheet conductive hardware 4 through the feed wire guide slots 11 of the resin mold 5. After that, the terminal assembly 13 is fitted on the spools 2 provided with the terminal pins 3. In this manner, the treatment of end sections can be simplified.
